

Texas Trees Foundation
for
Texas A&M Forest Service Schoolyard Forests Grant
Request for Proposals for
Tree Sourcing & Delivery Services
Questions & Answers

- **Would B&B trees comparable to 15gal sized be acceptable for some of the shrub species? There are not really any container options on some of this stuff?** B&B is acceptable with the following conditions.
 - Tree size must be comparable to a 15g size tree.
 - B&B trees must have been cured for at least 10-14 days before being delivered to ensure trees are still viable after being dug.
 - Pictures of the B&B trees must be sent for TTF approval.
 - The root ball must follow the 10"/1" trunk diameter at 6" above root flare ratio.
 - B&B trees must be delivered directly to the planting site to be planted within 2 days of being delivered. Trees may be delivered to a holding area in RGV more in advance prior to planting date for a project site if the broker has a holding area with adequate watering infrastructure to ensure the B&B trees do not dry out before being planted.
- **Do photos of trees need to be included in the proposal? Or just provided prior to delivery?** Photos of trees are provided prior to delivery. Photos of the holding facilities should be submitted with proposals.
